

Scalability & Future Plan

Date	30 September 2026
Team ID	SWTID-2026-8026
Project Name	Import Data using Transform maps (Spreadsheet)
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Only small spreadsheet files (5 to 6 rows) were tested.	Performance with large files is not known.	High
2	Import is done manually; there is no scheduled import.	Needs user action every time and takes more time.	High
3	No email notification or error report after an import.	Users do not know the result unless they open the logs.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	One user imports a file at a time.	Use scheduled imports and role-based access so many users can be supported.
2	Data Storage	Data is stored in the Import Set table and the target table.	Clean up old Import Sets regularly and archive old data.
3	Performance	5 to 6 rows are imported in 1 second.	Test with larger files, split big files and optimize transform scripts.
4	Security	Import is done by admin user only.	Add role-based access (ACL) and check the file type before import.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Scheduled Import to load the spreadsheet automatically at a set time.	October - November 2026	Removes manual work and saves time.
Phase 3	Email notification and error report after every import.	December 2026	Users get the import status immediately.
Phase 4	Support for large files and many users with role-based access.	January - March 2027	Handles bigger data and more users safely.
