

Project Initialization and Planning Phase

Date	30 September 2026
Team ID	SWTID-2026-8026
Project Title	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to make importing spreadsheet data into ServiceNow simpler and more reliable using transform maps. It tackles the slow and error-prone manual entry of data, promising saved time, fewer errors and cleaner records. Key features include spreadsheet upload, field mapping with duplicate checks, and an import log for failed rows.

Project Overview	
Objective	The primary objective is to make importing spreadsheet data into ServiceNow faster and easier by using import sets and transform maps, so that data is loaded correctly without typing it in by hand.
Scope	The project covers uploading Excel / CSV files, loading them into an import set table, mapping the columns to a target table using a transform map, and checking the results in the import log.
Problem Statement	
Description	Entering spreadsheet data into ServiceNow by hand is slow and causes mistakes such as duplicate or wrong records. There is no simple, repeatable way to move the data from a spreadsheet into the right table.
Impact	Solving this will save time for admins, reduce data errors and duplicate records, and make the data in the tables more reliable for reports and daily work.
Proposed Solution	
Approach	Load the spreadsheet into a staging (import set) table through a data source, then use a transform map with field maps, a coalesce field and field scripts to move the cleaned data into the target table.
Key Features	- Upload of Excel (.xlsx) and CSV files through a data source. - Transform map with field mapping and a coalesce field to avoid duplicates. - Field scripts to convert dates and choice values. - Import log and summary showing inserted, updated and failed rows.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Laptop with Intel i5 processor (4 cores); ServiceNow instance runs in the cloud
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	256 GB SSD
Software		
Frameworks	Platform / frameworks	ServiceNow Now Platform (Import Sets, Transform Maps)
Libraries	Additional libraries	Glide API (GlideRecord) for transform map scripts
Development Environment	IDE	ServiceNow Personal Developer Instance (PDI), Google Chrome, Microsoft Excel
Data		
Data	Source, size, format	Sample spreadsheets created by the team, about 500 rows, xlsx and csv
