

Customer Journey Map

Date	30 September 2026
Team ID	SWTID-2026-8026
Project Name	Import Data Using Transform Maps (Spreadsheet)
Team Size	3
Team Leader	Santhakumari V
Team Members	Nalayiram Chinnaveni A, Seema M
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 Upload the file	Stage 2 Set up transform map	Stage 3 Run and review
Actions <i>What does the customer do?</i>	- Collects the Excel / CSV file from the team - Checks for empty or wrong columns - Uploads the file to a data source	- Selects the import set table and the target table - Maps source columns to target fields - Sets the coalesce field	- Runs the transform map - Opens the import log to check results - Fixes failed rows and imports again
Touchpoint <i>What part of the service do they interact with?</i>	- Data Sources module - Import Set table - File attachment page	- Transform Maps module - Field Map list - Target table (e.g. Incident)	- Transform history / import log - Target table list - Email notification
Customer Thought <i>What is the customer thinking?</i>	"Will this file format load without errors?" "I hope no rows get lost." "This is better than typing everything."	"Which field matches which column?" "How do I avoid duplicate records?" "I only need to set this up once."	"Did every row get imported?" "Why did these rows fail?" "Good, the data is in the table."
Customer Feeling <i>What is the customer feeling?</i>	Hopeful, but a little unsure about the file format.	A bit confused at first, then more confident once the fields are mapped.	Relieved when the import is successful, annoyed if many rows fail.

Process Ownership <i>Who is in the lead on this?</i>	Administrator (uploads and checks the data)	Administrator (creates the transform map)	Administrator with the Data Analyst
Opportunities <i>How can we improve this stage?</i>	• Check the file format before upload • Show a clear error for wrong file types • Give a sample spreadsheet template	• Use auto map to suggest fields • Save and reuse transform maps • Add short help text for coalesce	• Show a simple summary of the counts • Explain the error reasons clearly • Send an email when it is done
