

Data Flow Diagram

Date	30 September 2026
Team ID	SWTID-2026-8026
Project Name	Import Data Using Transform Maps (Spreadsheet)
Team Size	3
Team Leader	Santhakumari V
Team Members	Nalayiram Chinnaveni A, Seema M
Maximum Marks	2 Marks

Data Flow Diagram

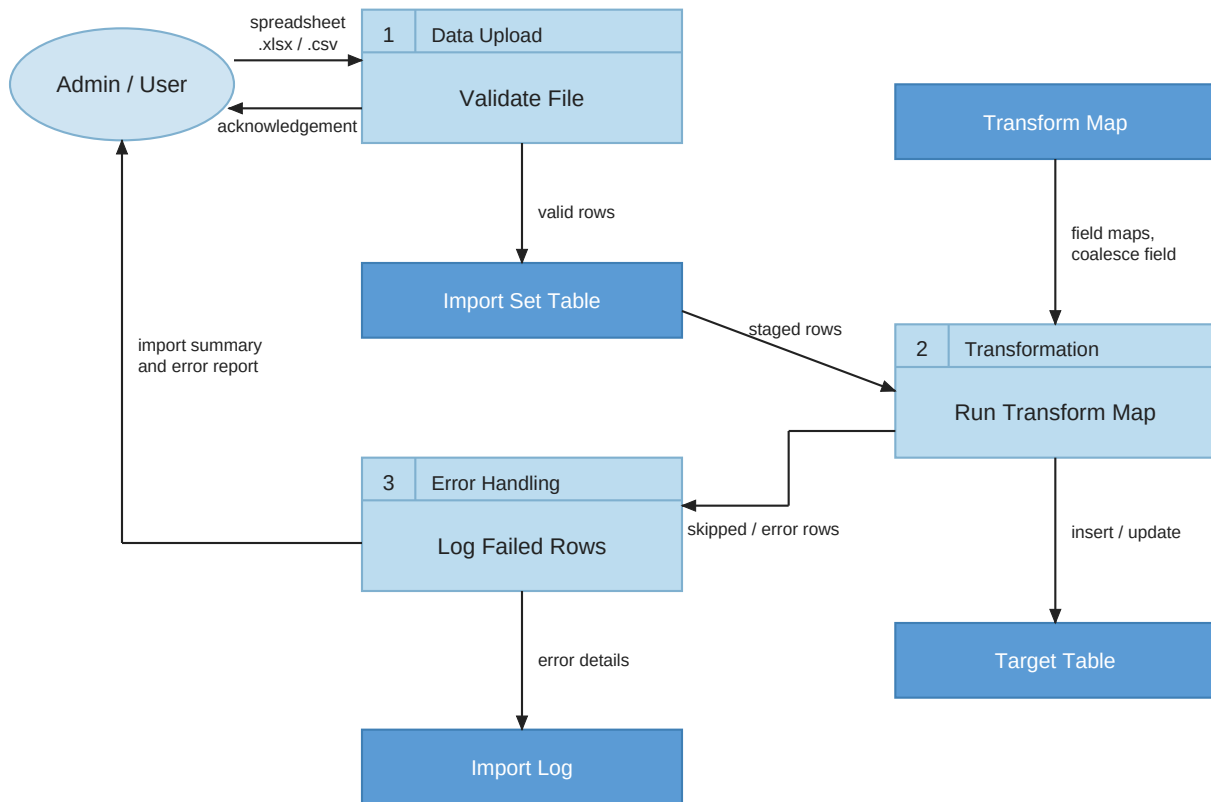

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., Admin / User).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Validate File, Run Transform Map).
Rectangle (solid fill, no number)	Data Store	A place where data is held for later use (e.g., Import Set Table, Target Table).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Project DFD

The diagram below shows how data moves when a spreadsheet is imported using transform maps.

How the data flows

1. The admin uploads an Excel / CSV file. Process 1 checks the file and sends back an acknowledgement or an error.
2. Valid rows are stored in the Import Set Table (staging table).
3. Process 2 reads the staged rows, uses the Transform Map (field maps and coalesce field) and inserts or updates records in the Target Table.
4. Rows that are skipped or fail go to Process 3, which saves the details in the Import Log and sends an import summary and error report to the admin.
