

Technology Stack

Date	30 September 2026
Team ID	SWTID-2026-8026
Project Name	Import Data Using Transform Maps (Spreadsheet)
Team Size	3
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Next Experience UI (Data Sources, Import Sets and Transform Maps modules)	The platform already has forms and lists for uploading files and setting up maps, so we do not need to build a separate frontend. It also works on different screen sizes.
2	Backend / Server-Side	Server-side JavaScript (Glide API and transform map scripts)	Runs inside the platform. Used for field scripts and onBefore / onAfter scripts to convert dates, choice values and reference fields while importing.
3	Database / Data Storage	ServiceNow platform database (import set staging tables and target tables)	Relational tables are managed by the platform, so no separate database setup is needed. Rows go to the staging table first and then to the target table (e.g. Incident, User).

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
4	Cloud / Hosting / Deployment	ServiceNow Personal Developer Instance (PDI)	Free cloud instance for learning and testing. No server or hosting setup is needed, and we can reset it if something goes wrong.
5	Version Control & CI/CD	ServiceNow Update Sets and GitHub	Update Sets move our transform map and scripts between instances. GitHub is used to keep the scripts and project documents so all 3 of us can share them.
6	Third-Party APIs / Other Tools	Microsoft Excel / CSV files, ServiceNow email notifications	Excel and CSV spreadsheets are the source of the data to be imported. Email notification tells the admin when an import is finished.
