

Project Executable Files

Date	30 September 2026
Team ID	SWTID-2026-8026
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

/project-root
/update-sets - Exported update set (data source, import set table, transform map)
/sample-data - Sample Excel / CSV files used for the import
/scripts - Transform map field scripts (onBefore / onAfter)
/tests - Test cases and import log screenshots
/docs - Project documents (PDF reports)
README.md - Setup and run instructions

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	<i>[add ServiceNow PDI instance URL]</i>
Login Credentials (Demo)	<i>[add demo username and password for evaluator access]</i>
Platform / Hosting Provider	ServiceNow Personal Developer Instance (PDI) - cloud hosted
Repository Link	<i>[add GitHub repository link]</i>
Demo Video Link	<i>[add demo video link]</i>

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

A free ServiceNow Personal Developer Instance (PDI) with admin access, Google Chrome, and Microsoft Excel to open the sample files.

Step 1: Log in to the ServiceNow PDI as admin.

Step 2: Import the update set from /update-sets (System Update Sets > Retrieved Update Sets > Import Update Set from XML), then preview and commit it.

Step 3: Go to System Import Sets > Load Data and upload the sample Excel file from /sample-data.

Step 4: Open System Import Sets > Administration > Transform Maps and check the field maps and the coalesce field.

Step 5: Click Transform to run the map on the import set.

Step 6: Open the target table list to see the records, and check the transform history for skipped or failed rows.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Only .xlsx and .csv files are supported. Other formats are rejected.	Convert the file to .xlsx or .csv before uploading.
2	Column names in the file must match the data source. If the header row changes, the field maps stop working.	Keep the same header row, or update the field maps.
3	Very large files (above about 20,000 rows) load slowly on the free PDI.	Split the file into smaller parts and import them in batches.
