

Coding & Solution

Date	30 September 2026
Team ID	SWTID-2026-8026
Project Name	Import Data using Transform maps (Spreadsheet)
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub link here]
Programming Language(s)	JavaScript (ServiceNow server-side scripting)
Framework(s) Used	ServiceNow Platform: Data Source, Import Set, Transform Map (Field Maps, Coalesce)
Key Features Implemented	• Import data from Excel (.xlsx) spreadsheet using a Data Source • Loads rows into an Import Set staging table • Transform Map with field mappings to the target table • Coalesce on key field to avoid duplicate records • onBefore script to validate data and skip invalid rows • Import logs to check inserted / updated / ignored rows
Pending / Incomplete Features	• Scheduled (automatic) import of spreadsheets • Email notification after import completes
Setup / Run Instructions	1. Log in to the ServiceNow instance (PDI) as admin. 2. Create a Data Source (Type: File, Format: Excel) and attach the .xlsx file. 3. Click Load All Records to load data into the Import Set table. 4. Create a Transform Map (Import Set table to target table) and set the field maps. 5. Click Transform, then check the target table and Import Set Rows for results.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The spreadsheet data was imported successfully into the target table using the Transform Map. Validation scripts skip invalid rows, and duplicates are avoided using Coalesce. Scheduled imports and email notifications can be added in future.
