

Empathy Map

Date	30 September 2026
Team ID	SWTID-2026-8026
Project Name	Import Data Using Transform Maps (Spreadsheet)
Team Size	3
Team Leader	Santhakumari V
Team Members	Nalayiram Chinnaveni A, Seema M
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS "I get spreadsheets from different teams every week and have to enter them by hand." "Can I just upload the file and have it go into the right table?" "Why did some rows fail? I can't tell which ones."	THINKS - Typing rows one by one takes too long and I may make mistakes. - If I map the columns properly once, I can reuse it next time. - I hope the import does not create duplicate records.
DOES - Collects Excel / CSV files from the team and checks for missing values. - Creates a data source and loads the file into an import set table. - Sets up a transform map and field maps, runs it and checks the import log.	FEELS - Frustrated when manual data entry takes hours. - Worried that wrong or duplicate data will go into live tables. - Relieved and confident when the import finishes with no errors.
